

Television Broadcast Services

STELLAR has a strong digital distribution platform for Direct-To-Home (DTH) and Direct-To-Cable (DTC) broadcasts.

STELLAR is the **one-stop-shop** covering the complete value chain for broadcasts in Europe, the US, Canada, Africa, Middle East and Asia.

The satellite footprint of our 70 antennas in C and Ku-bands, together with our fiber network and teleport partners, will get you connected to all five continents. With advanced transmission, production and broadcast technologies, STELLAR has the distribution capacity to broadcast a wide range of material and formats across a worldwide network.

STELLAR's redundant uplink facilities, 24/7 monitoring and diverse connectivity to your broadcast or switching center ensures outstanding reliability for your channel.

STELLAR delivers fully managed playout services from an automated, state-of-the-art, high capacity facility with servers that enable you to expand the number of channels you want to broadcast.

STELLAR operates and delivers content to large digital pay-TV distribution platforms.

Programs can be delivered to us for playout from studios, on tapes or CD, over fiber links, via the Internet or via satellite links.

Television broadcast services offered:

- TV distribution platform operations
- TV contribution (fiber and satellite)
- Playout and turnaround
- Occasional event service

"STELLAR are the first to call when launching a new service. They are fast, efficient and cost-effective."

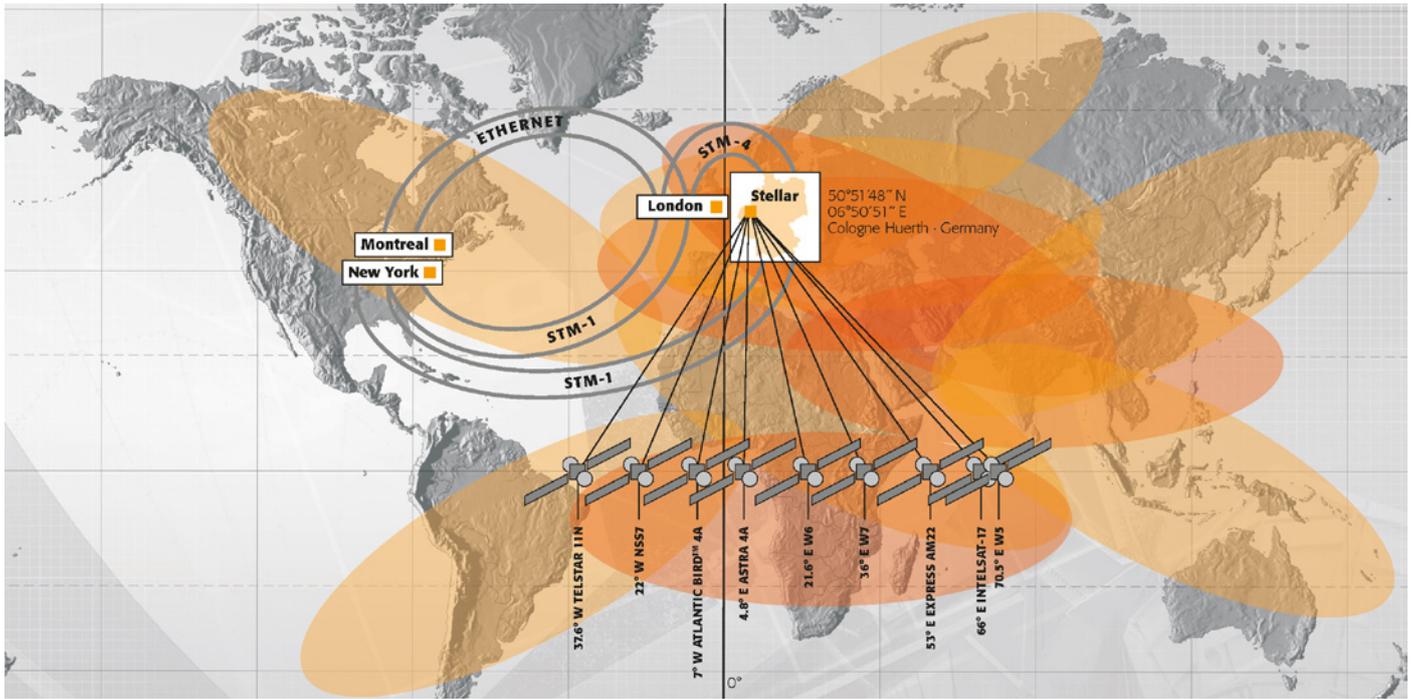

Awaes Jaswal, CEO, Viewsat, London

Bandwidth Access Services

STELLAR's close relationship with the worlds largest satellite operators combined with our own worldwide fiber network, make it easy to get bandwidth when and where you need it and for any kind of transmission format.

Bandwidth access services offered:

- Provision of satellite capacity
- Worldwide lease line connections

Global optical fiber network

Apart from the use of geostationary satellites STELLAR owns a global optical fiber infrastructure. In the following locations (so called POP's Points-of-Presence) STELLAR operates its own fiber subsystems where any kind of digital signals can be received:
